REPORT

TO

HIS EXCELLENCY JOHN DENTON PINKSTONE, VISCOUNT FRENCH, &c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

The Annual Report which I have the honour of submitting to Your Excellency is the fifty-sixth which has been issued from this Office since its establishment in the year 1864, and it contains the records of the Vital Statistics of Ireland for the year 1919.

GENERAL SUMMARY.

The marriage rate (6·09 marriages per 1,000 of the population) for the year 1919 is 0·96 per 1,000 above the rate for 1918, and 0·89 above the average for the ten years, 1909–18. The rate for 1919 is the highest recorded for Ireland.

The rate (20·0 per 1,000) represented by the births registered during the year, is 0·2 per 1,000 above the rate for 1918, but 2·1 per 1,000 under the average for the decennium, 1909–18. The total number of births (89,325) registered in 1919 is 2,021 above the number for the preceding year.

The death rate from all causes during the year 1919 is 17·6 per 1,000 of the population, or 0·3 per 1,000 below that for the preceding year, but 0·7 per 1,000 above the average for the ten years, 1909–18.

The outstanding feature of the mortality statistics for the year 1919 (as in the year 1918) is the excessive mortality from influenza and pneumonia, deaths from influenza amounting to 9,406, as compared with an average of 2,119 for the preceding ten years, those from pneumonia numbering 5,245, as against an average of 4,267. The rate per 1,000 of the population represented by deaths from influenza during the year was 2·11, and from pneumonia it was 1·18 as compared with averages of 0·48 and 0·97, respectively, for the preceding ten years.

It may be stated that were it not for this excessive mortality from influenza and pneumonia, the years 1918 and 1919 would have created records for low mortality from all causes in Ireland.

The rate represented by the deaths from all forms of tuberculosis during the year is equivalent to 1·94 per 1,000 of the population, being 0·24 per 1,000 under that for 1918, and 0·26 per 1,000 under the average for the ten years, 1909–18. The mortality from tuberculosis for the year 1919 is the lowest recorded in Ireland.

The infant mortality rate (deaths of infants under one year of age per 1,000 births registered) for the year 1919 is 88, as compared with 86 in 1918, and an average of 90 for the ten years, 1909–18.

TABLE I.—Showing for each of the years 1909–1919 the estimated **Population** * ; the number of **Marriages, Births** and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby ; and the averages for the ten years, 1909–1918.

YEARS	*Estimated Population in the middle of each year	Numbers *Registered*			Number of Emigrants as returned by the Enumerators	Rate per 1,000 of Estimated Population

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 753. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 6 cases. In 4 of these the parties were convicted and punished; one case was dismissed; and in the remaining one, the proceedings were abandoned, the parties complying with the law.

Amongst the offences dealt with the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths.

A sum of £90 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £12 6s. 9d., of which sum £5 7s. 3d. was paid for local professional assistance, and £5 13s. 0d. for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

There were 27,193 marriages registered during the year, being equivalent to a rate of 6·09 per 1,000 of the estimated population *; this rate is 0·96 above that for the previous year, and 0·89 above the average for the ten years, 1909–1918.

Of the 27,193 marriages registered during last year, 18,756 were of Roman Catholics, as compared with 15,733 in 1918; the remaining marriages numbering 8,437 in 1919, as against 6,837 in 1918. Included in the 8,437 marriages are 4,247 celebrated according to the rites and ceremonies of the Church of Ireland, as against 3,566 in 1918; 3,008, as compared with 2,319 in 1918, were in Presbyterian Meeting-houses; 643 as against 522 in 1918, in "Registered Buildings" belonging to various religious denominations; 514 by civil contract in the Registrars' offices, as against 412 in 1918; 6 were according to the usages of the Society of Friends, as against 3 in 1918; and 19, as compared with 15 in 1918, were according to the Jewish rites.

The marriages of Roman Catholics are equivalent to a rate of 5·69 per 1,000 of the estimated Roman Catholic population, or 0·68 above the corresponding average rate for the preceding ten years, and the other marriages are equivalent to a rate of 7·23 per 1,000 of all persons other than Roman Catholics in the population, this rate being 1·51 above the corresponding average rate for the ten years, 1909–1918.

Of the 4,247 marriages celebrated according to the rites of the Church of Ireland, there were 94 by special licence, 3,645 by licence, 491 after the publication of banns; and in 17 instances the mode of celebration was not stated.

* The rates for the total of Ireland, the county boroughs of Dublin and Belfast and Londonderry county and county borough, are based on the estimated population in the middle of the year 1919, those for the provinces and remaining counties on the population according to the Census of 1911. (See page 58).

The number of Licences for Marriages issued by the Registrars during the year 1919 in Registered Buildings and in the Registrars' Offices was 1,078.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod	Number of Licensing Ministers on 31st December, 1919.	Number of Registered Meeting-houses on 31st December, 1919.	Number of Licences issued
1. General Assembly of the Presbyterian Church in Ireland	157	587	2,873
2. Remonstrant Synod of Ulster	10	20	40
3. Presbytery of Antrim	5	11	29
4. United Presbytery or Synod of Munster	2	2	2
5. Presbytery of Ireland (United Free Church of Scotland)	5	8	32
Total	179	628	2,976

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine Worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1919, there were 1,487 churches and chapels of the Church of Ireland, 628 registered Presbyterian Meeting-houses, and 438 "Registered Buildings" belonging to various religious denominations.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1919, is shown in the following list:—

Denominations	No. of Places of Worship	Denominations	No. of Places of Worship	Denominations	No. of Places of Worship
Methodists	266	Salvation Army	9	"Pentecostal"	2
Reformed Presbyterians	39	Seceders	8	"Undenominational" ...	2
Baptists	33	"The Catholic Apostolic Church"	2	"Holiness Movement" ... Church	1
Independents, or Congregationalists	30	Non-Subscribing Unitarians	1		
Christian Brethren ...	35	Non-Subscribing Christians	1	Total	438
Moravians, or Utd. Brethren	8	Welsh Presbyterians ..	1		

During the year 1919, of the 27,193 marriages registered, 6,469 were recorded in the first quarter, 6,669 in the second, 7,359 in the third, and 6,696 in the fourth quarter.

Printed image digitised by the University of Southampton Library Digitisation Unit

From the figures given in the Abstract of Marriages, pages 12–13, it will be found that the marriages of bachelors with spinsters constituted 87·5 per cent. of the total; that those of widowers and spinsters were 6·1 per cent.; that the marriages of bachelors and widows were 4·2 per cent.; and that those of widowers and widows formed 2·2 per cent. of the total marriages. Thus, of the men married, 8·3 per cent. were widowers, and of the women 6·4 per cent. were widows, so that in 13 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1909–1919, and the average number for the ten years, 1909–1918, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

The entry of "minor" or "full age," as the case may be, in the age column of Marriage Registers or Certificates, satisfies the requirements of the law in Ireland, so far as the ages of the contracting parties are concerned. In the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year. In 1919 the number of instances in which **both parties** furnished their ages was 5,915,* equivalent to a rate of 21·8 per cent. of the total marriages recorded. Of those married in 1919 in Ireland 23·4 per cent. of the husbands and 24·6 per cent. of the wives made definite statements of their age, the corresponding figures for England and Wales for 1918 being 99·1 per cent. for husbands, and 99·0 per cent. for wives.

Of the men married during the year, 489 or 1·80 per cent. were under age; and of the women married 1,975 or 7·26 per cent., were minors.

The proportion of husbands who married under age in 1919 was as follows for each province:—Ulster, 2·07 per cent. of the marriages; Leinster, 2·06 per cent.; Munster, 1·23 per cent.; and Connaught, 0·92 per cent.

The corresponding proportions for wives were—Ulster, 9·15 per cent.; Leinster, 6·41; Munster, 5·39, and Connaught, 5·29 per cent.

It may be stated that in Ireland the percentage of persons married who were under age is much below the corresponding percentages in England and Scotland.

* In 1,222 instances, comprising 458 men and 764 women, the age at marriage was stated by only one of the contracting parties.

Printed image digitised by the University of Southampton Library Digitisation Unit

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education in Ireland. In the year 1919 there were 26,191 or 96·3 per cent. of the husbands, and 26,454, or 97·3 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 21,178, or 93·5 per cent. of the husbands, and 21,516 or 95·0 per cent., of the wives, in the year 1909.

During the year, 96·8 per cent. of the men married in each of the provinces of Leinster and Munster wrote their names; 96·3 per cent. in Ulster, and 93·7 per cent. in Connaught; and, among women, the percentages were as follows:—Munster, 97·9; Ulster, 97·4; Leinster, 97·0; and Connaught, 96·5.

In 232 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,277 cases, so that in 1,509 cases, or 5·5 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 25,684 marriages, or 94·5 per cent., **both** parties wrote their names.

The following table gives for Ireland in each of the eleven years, 1909–1919, the proportion of persons married who wrote their names in the registers or certificates; the proportion of minors married; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland during the years 1909–1919, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-Marriages.**

Years	Signed their Names in writing		Persons not of Full Age		Re marriages	
					Widowers	Widows
	Of 100 Men Married	Of 100 Women Married.	Of 100 Men Married	Of 100 Women Married	Of 100 Men Married	Of 100 Women Married
1909 ...	93·5	95·0	1·67	6·84	8·07	3·89
1910 ...	93·5	95·3	1·51	6·28	7·92	3·93
1911 ...	93·9	96·0	1·23	5·31	8·06	3·32
1912 ...	94·3	96·2	1·75	6·38	8·23	4·07
1913 ...	94·2	96·5	1·89	6·91	7·90	4·13
1914 ...	94·6	96·4	1·63	6·24	7·95	4·01
1915 ...	95·3	96·6	1·95	6·81	7·37	3·82
1916 ...	95·2	97·1	1·83	6·58	7·78	4·34
1917 ...	95·4	96·8	2·10	7·74	8·04	4·84
1918 ...	96·2	97·6	1·79	6·39	7·87	5·19
1919 ...	96·3	97·3	1·80	7·26	8·31	6·41

In the province of Ulster during the year 1919, as may be seen in Table III., the marriage rate was 7·3 per 1,000 of the population, according to the Census of 1911; the rate in Leinster was 6·6 per 1,000; in Munster it was 5·5 per 1,000, and in Connaught 3·7 per 1,000.

BIRTHS.

The births registered during the year 1919 numbered 89,325—46,202 boys and 43,123 girls—the ratio per 1,000 of the estimated population being 20·0, which is 2·1 below the average rate per 1,000 for the ten years, 1909–1918.

The total births in 1919 are 2,021 above those registered in the preceding year, viz., 87,304.

The proportion of male infants born alive in 1919 was 107·1 to every 100 females; in 1918 it was 104·7 to 100; in 1917 it was 105·2 to 100; in 1916 it was 106·5 to 100; in 1915 it was 106·4 to 100; and in 1914, the proportion of males was 105·2 to every 100 females.

Of the 89,325 births registered in Ireland during the year, 86,419, or 96·7 per cent. were legitimate, and 2,906 or 3·3 per cent. were illegitimate, the latter being 0·2 above the percentage for the preceding year. As regards illegitimacy Ireland compares favourably with most other countries.

The male children born in wedlock numbered 44,739, and the female 41,680, or 107·3 of the former to every 100 of the latter; of the illegitimate children, 1,463 were males, and 1,443 females, being 101·4 boys to 100 girls.

Printed image digitised by the University of Southampton Library Digitisation Unit

Of the children born in Ulster, 4·0 per cent. were illegitimate; in Leinster, the percentage was 3·5; in Munster, 3·0; and in Connaught, 0·8; the corresponding percentages for the preceding year being:—for Ulster, 4·1; for Leinster, 3·6; for Munster, 2·4; and for Connaught, 0·6.

In the provinces the rates represented by the total births registered during the year 1919 were as follows:—Leinster, 20·7 per 1,000 of the population in 1911; Munster, 19·6; Ulster, 21·4; and Connaught, 18·2. [See Table III.]

Of the total births, 50·9 per cent. were registered in the first six months of the year (181 days), and 49·1 per cent. in the second six months of the year (184 days).

The total number of births registered in the first quarter of the year was 21,909; in the second, 23,515; in the third, 21,374; and in the fourth, 22,527.

Multiple Births.

There were 1,126 twin births and 10 triplet births registered in Ireland during the year 1919. The twin births were 1·26 per cent. of the total births, 1·29 per cent. of the single births, and 1·28 per cent. of the total mothers.

In the year 1918 the twin births numbered 1,073 and the triplet births 12, the twin births representing 1·23 per cent. of the total births, 1·26 per cent. of the single births, and 1·24 per cent. of the total mothers.

DEATHS.

The deaths registered in Ireland during the year numbered 78,612, and afford a rate of 17·6 per 1,000 of the population, estimated to the middle of 1919. Of the deaths, 39,019 were males, and 39,593 were females, equivalent to 17·3 and 17·9 per 1,000 of the male and female population, respectively.

The total death rate is 0·3 per 1,000 below that for the year 1918, but 0·7 above the average death rate for the 10 years, 1909–18.

For the province of Leinster the death rate was 19·4 per 1,000, for Munster 16·8, for Ulster 18·2, and for Connaught 16·1.

The number of deaths rose from 18,286 in the first quarter of 1918 to 28,106 in the first quarter of 1919, and in the second quarter from 18,272 to 20,854; in the third quarter of 1919 the deaths numbered 13,759, as compared with 15,426, and in the fourth quarter the deaths amounted to 15,893, as compared with 26,711 in the corresponding quarter of the year preceding. The increased mortality in the first half of the year under review is accounted for by an epidemic of influenza to which cause 9,406 deaths during the year were attributed.

Of the total deaths during the year under review, 62·3 per cent. were registered during the first six months, January to June inclusive, and 37·7 per cent. in the remaining six months.

The annual rates represented by the deaths registered in each quarter are as follows:—25·2 per 1,000 of the population for the first quarter; 18·7 for the second; 12·3 for the third; and 14·2 for the fourth. The rate for the first quarter is 5·5 above, for the second 1·1 above, for the third 1·5 below, and for the fourth 2·2 below the average rate for the corresponding quarters in the ten years, 1909–1918.

As will be observed from the table on page 48, *of the* 78,612 *deaths registered during the year,* 4,292 *took place in Infirmaries and General and Special Hospitals;* 1,941 *in Public Lunatic Asylums;* 10,182 *in Workhouses and Workhouse Hospitals; and* 62,197 *were of persons who died "At their Own Homes," &c.*

Of the total deaths registered in Ireland, 5·5 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 1·0 in Connaught to 11·2 in Leinster. Deaths which took place in the Workhouses or Workhouse Hospitals constituted 13·0 per cent. of the total deaths, the respective percentages of these deaths for the provinces being—Leinster, 14·9; Munster, 17·6; Ulster, 9·7; and Connaught, 9·6.

CAUSES OF DEATH.

The classification of the causes of death adopted in this Report is that of the International Nomenclature of Diseases and causes of death; this is also used in the offices of the Registrar General of England and Wales, and the Registrar-General of Scotland.

In the table which follows, the number of deaths from some of the principal diseases are shown for the years 1918 and 1919, also the averages for the 10 years 1909–1918.

CAUSES.	Number of Deaths registered			CAUSES.	Number of Deaths registered.		
	Years.		Average 10 years 1909-18		Years		Average 10 years 1909-18
	1919.	1918.			1919.	1918.

Tuberculous Disease ...	8,643	9,576	9,625				

Printed image digitised by the University of Southampton Library Digitisation Unit

The prominent figure in the preceding table is 9,406, which represents the deaths which were caused by influenza, this malady re-appearing with virulence during the March quarter of the year. Although the deaths were not so numerous as in the year 1918, when 10,651 were caused by influenza, both the figures for 1918 and 1919 were far in excess of the number in any of the preceding years, the average for the decennial period, 1909–1918 being 2,119. There were 263 deaths from scarlet fever, which had caused 91 deaths in 1918; the number of deaths from diphtheria was 253 as compared with 219 in the year 1918; and the deaths from bronchitis increased from 5,794 in 1918 to 6,593 in the year under notice.

The deaths from tuberculous disease, which amounted to 9,576 in 1918, fell to 8,643 in 1919. Deaths from enteric fever declined from 267 in 1918 to 189 in 1919; deaths from measles from 640 to 257; deaths from whooping-cough from 1,031 to 445; deaths from pneumonia from 6,120 to 5,245 (the latter figure is still higher than the average, 4,267, for the 10 years, 1909–1918), and deaths from diarrhœa and enteritis of children under two years of age from 943 to 918.

The deaths from puerperal septic diseases declined slightly from 160 to 155, and those from accidents of pregnancy and childbirth rose from 259 to 263, the respective averages for those groups being 196 and 309.

Enteric Fever.—As already stated, the deaths registered from enteric fever in the whole of Ireland during the year 1919 numbered 189, of males 94 and of females 95. The number of deaths from enteric fever in the year 1918 was 267, and the average for the 10 years ending with the latter year, 281. Of the deaths, 16 occurred in Dublin co. borough, 8 in Belfast co. borough, 10 in Limerick union, 13 in the union of Newcastle, and 16 in Lisburn union, 10 of the latter appertaining to Belfast county borough. Included in the deaths from enteric fever are 4 deaths of females returned as from paratyphoid fever, the ages being 13, 35, 54, and 55 years respectively.

Typhus.—The deaths from typhus, which numbered 34, were 6 fewer than in the year 1918, and include the deaths of 18 males and 16 females. The county boroughs and unions in which deaths from typhus were registered will be seen on reference to the abstracts commencing on page 48 of this report.

Small-pox.—There has not been any mortality from small-pox recorded in Ireland since the year 1907, during which year only one death was registered.

Measles.—The deaths attributed to measles numbered 257, those of males numbering 144, and of females, 113. Of the total, 130 were deaths of children under 2 years of age, 91 were between the ages of 2 years and 5 years, and 28 deaths occurred between the ages of 5 years and 10 years. The deaths from measles are below the average (665) and under the number registered in the year 1918, namely, 640. Of the total deaths from measles, 33 were registered in Dublin union, 126 in Belfast union, 11 in Castletown union, and 10 in Newtownards union.

Scarlet Fever.—The decline in the mortality from scarlet fever in the year 1918, was followed by an increase in the year 1919; deaths rose from 91 in the former to 263 in the latter year. Of the total deaths, 23 were of children under 2 years; 90 were of children between the ages of 2 years and 5 years, 84 occurred between the ages 5 years and 10 years, 41 between 10 years and 20 years, and 25 of the deaths from scarlet fever were those of persons aged 20 years and upwards, Of the total deaths, 88 were registered in Belfast county borough, and 53 persons belonging to Belfast died in the Purdysburn Fever Hospital, in the union of Lisburn; 28 were registered in Dublin county borough, and 10 in the union of Londonderry. The county borough of Belfast suffered from epidemics of influenza, measles, and scarlet fever in the second half of the year 1919, following the epidemic of influenza in the March quarter of the year.

* Per cent. of Total Deaths.

Printed image digitised by the University of Southampton Library Digitisation Unit

WHOOPING-COUGH.—The mortality from whooping-cough declined from 1,031 deaths in the year 1918 to 445 in the year under notice, the latter figure being equal to a rate of 0·10 per 1,000 of the estimated population. Of the total, 209 were deaths of males and 236 were deaths of females. The locality which appears to have been principally affected with this disease was the union of Londonderry, in which 78 deaths were recorded. In Dublin union there were 21 deaths, and in the following unions 10 or more deaths were recorded: Cavan, 17 deaths; Cork, 16; Castleblayney and Sligo, each 15 deaths; Kilkenny, 14; Oldcastle, 12; and Ballymoney and Rathdrum, each 10 deaths.

DIPHTHERIA AND CROUP.—There were altogether under this heading 309 deaths, of which figure 253 were deaths attributed to diphtheria and 56 to croup. The total deaths from diphtheria (253) are more than the number recorded in the year 1918, namely, 219, but are below the average for the 10 years 1909–1918 by 67. Thirty-nine deaths from diphtheria were registered in Cork union, 30 in Dublin county borough, and 6 in the county borough of Belfast. In addition, 23 deaths from diphtheria appertaining to the latter area occurred in the union of Lisburn.

INFLUENZA.—Following the high mortality from influenza in the year 1918, an epidemic appeared, which was universal throughout Ireland, during the first quarter of the year 1919. The total number of deaths from influenza during this year amounted to 9,406, equal to a rate of 2·11 per 1,000 of the population, as compared with 10,651 deaths registered in the year 1918, and a rate of 2·42. Of the total deaths in 1919, 4,921 were of males and 4,485 of females. The disease appears to have caused death at all periods of life, the deaths in the ages of those between 20 years and 65 amounted to 5,495, or more than 58 per cent. of the total mortality.

Of the total deaths, 6,835 were registered in combination with other diseased conditions, as shown in the following table:—

TABLE showing for Ireland, the number of Deaths classed to Influenza, viz, (1) Deaths in which Influenza was returned as the sole cause, and (2) Deaths assigned to Influenza, with which the undermentioned causes were associated:—

CAUSES OF DEATH	NUMBER OF DEATHS.		
	Total	Males	Females
Influenza returned as the only cause	2,571	1,210	1,361
Influenza stated to be associated with:—

DYSENTERY.—The deaths caused by dysentery numbered 38; of this number, 12 were of males and 26 were of females; in the year 1918 deaths from this disease numbered 13.

DIARRHŒAL DISEASES.—The morbid conditions under this heading include infective enteritis, diarrhœa due to food, diarrhœa, non-infective; enteritis, non-infective, and gastro-enteritis, and include the deaths of 918 infants under 2 years of age, as compared with 943 in the year preceding; the deaths (918) are 9·3 per cent. of the deaths of all children under the age of 2 years. Of the total (918) there were 272 in Dublin county borough, 183 in Belfast county borough, 86 in Cork county and county borough, 29 in Limerick county and county borough, and 30 in Waterford county and county borough, making a total of 600, or over 65 per cent. of the total deaths of infants under 2 years of age from diarrhœal diseases recorded for the entire country.

OTHER EPIDEMIC DISEASES.—The deaths from other epidemic diseases include 7 from malaria (all being deaths of males), 4 from cholera nostras (2 of males and 2 of females, 4 (all of males) from mumps, 2 from German measles (one male and one female), and 5 from varicella (3 males and 2 females).

SYPHILIS.—Of 76 deaths stated to be caused by syphilis, 41 were of males and 35 were of females; of the males, 28 were under one year of age, and of the females, 25.

Deaths from locomotor ataxia numbered 22, and of these 17 were of males and 5 were of females; general paralysis of the insane caused 90 deaths, 80 being of males and 10 of females; and deaths from aneurysm were 45—of males 36 and of females 9.

In the year 1918, deaths from locomotor ataxia were 42 (of males 35 and of females 7), deaths from general paralysis of the insane were 104 (of males 94 and of females 10), and deaths from aneurysm numbered 50 (of males 36 and of females 14).

ERYSIPELAS.—Fifty-eight deaths (of males 33 and of females 25) were from erysipelas; in the year 1918 the deaths from this cause were 64 in number.

PYÆMIA, SEPTICÆMIA.—There were 24 deaths from pyæmia (of males 13 and of females 11) and 107 from septicæmia—of males 57 and of females 50. These figures do not include deaths of women returned as being due to the puerperal state.

TETANUS.—Of 41 deaths caused by tetanus, 30 were of males and 11 were of females.

TUBERCULOSIS.

The total number of deaths from tuberculosis was 8,643, equivalent to a rate of 1·94 per 1,000 of the population of Ireland estimated to the middle of the year 1919.

The number of deaths from tuberculosis, is the lowest that has been recorded since the initiation of registration. As may be seen from the observations on influenza mortality, which disease caused 9,406 deaths in the year 1919, it would appear that 197 persons whose deaths were assigned to influenza were stated on the medical certificate to have been also suffering from some form of tuberculosis.

The total deaths, 8,643, include 6,687 from pulmonary tuberculosis, 522 from tuberculous meningitis, 523 from tuberculous disease of the peritoneum and intestines, and 911 deaths from other forms of the disease. Details regarding the sex and age of persons dying from the several forms of tuberculosis will be found in the abstracts commencing on page 36.

A comparison with England and Wales and with Scotland, for the year 1919, shows that the rate for tuberculosis in Ireland was 1·94 per 1,000 of the estimated population in England and Wales, 1·26, and in Scotland, 1·29 per 1,000.

Printed image digitised by the University of Southampton Library Digitisation Unit

A comparison of the mortality from tuberculosis in Ireland in 1919 with the ten years preceding is afforded by the following table :—

Year	Males		Females		Total		Annual Increase		Annual Decrease	
	Number of Deaths	Rate per 1,000 of the Male population	Number of Deaths	Rate per 1,000 of the Female population	Number of Deaths	Rate per 1,000 of the population	Number	Per cent	Number	Per cent

Average, 1909–1918,	4,786	2·20	4,839	2·20	9,625	2·20	—	—	1,018*	9·6*
1919 ...	4,077	1·81	4,566	2·07	8,643	1·94	—	—	933	9·7

* Decrease in 1918 as compared with 1909.

Of the total deaths from tuberculosis, 2,761, corresponding to an annual death rate of 2·38 per 1,000 were registered in the Province of Leinster; 1,833—rate, 1·77—in Munster; 3,291—rate, 2·08—in Ulster; and 758—rate, 1·24 per 1,000—in Connaught. As compared with the year, 1918, there were 286 fewer deaths in Leinster, 336 in Munster, 260 in Ulster, and 51 in Connaught.

The following Table shows by counties the mortality represented by the number of deaths registered from all forms of tuberculous disease during the year 1919, with the increase or decrease in the latter year as compared with 1918.

From a table of occupational mortality for the Dublin Registration Area, published in the Yearly Summary for 1919, the death rate from tuberculosis among the professional and independent classes was 1·43 per 1,000; among the middle classes it was 2·16 per 1,000; among the artisans and petty shopkeepers, 2·88 per 1,000; and among the general service class it was 3·15 per 1,000.

PULMONARY TUBERCULOSIS.—The deaths amounted to 6,687 and include those returned as from tuberculous phthisis, phthisis, tuberculosis (not defined), acute phthisis, and miliary tuberculosis. The total includes the deaths of 3,097 males, corresponding to a rate of 1·37 per 1,000 males living, and 3,590 females, corresponding to a rate of 1·63 per 1,000 females living.

When the figures are examined as regards the ages of the deceased, the records show that from the age period 5–10 years to the age period 35–45 years the deaths of females are in excess of the deaths of males; from the age of 45 and upwards the deaths of males exceed those of females.

The death rate for males between the ages of 10 and 15 years was 0·40 per 1,000, and of females, 0·94 per 1,000; between 15 and 20 years, 1·44 per 1,000 males, 2.50 per 1,000 females; 20–25 years, 2·26 per 1,000 males, 2·97 per 1,000 females; 25–35 years, 2·33 per 1,000 males, 2·63 per 1,000 females; 35–45, 2·16 per 1,000 males, 2·53 per 1,000 females; 45–55, 2·23 per 1,000 males, 1·86 per 1,000 females; 55–65 1·54 per 1,000 males, 1·29 per 1,000 females; over 65 years, 0·42 per 1,000 males, 0·34 per 1,000 females.

TUBERCULOUS MENINGITIS.—The total number of deaths from tuberculous meningitis was 522 and the rate 0·12 per 1,000. Of this figure, 303 were deaths of males and 219 of females, the corresponding rates being 0·13 and 0·10 per 1,000. Of the total deaths, 196 were those of children under 5 years of age, 104 were between the ages of 5 and 10 years, 88 between the ages of 10 and 15 years, and 65 between the ages of 15 years and 20 years.

ABDOMINAL TUBERCULOSIS.—The deaths included in this heading were 523, of males 224 and of females 299, corresponding to the rates of 0·12, 0·10, and 0·14 per 1,000 respectively. The total deaths include 84 from tabes mesenterica; 279 from tuberculous peritonitis, 91 from tuberculous enteritis, and 69 from other forms of abdominal tuberculosis.

OTHER FORMS OF TUBERCULOUS DISEASE.—These include 148 deaths from tuberculosis of the spinal column, 154 from tuberculosis of joints, 23 from lupus, 10 from scrofula, 173 from tuberculosis of other organs, and 403 from disseminated tuberculosis; in the aggregate these number 911, and are equal to an annual rate of 0·20 per 1,000 of the estimated population.

Notification of Tuberculosis.

An Order of the Local Government Board came into force on the 1st April, 1919, by which the widest possible effect is given to the powers conferred by Sec. 1 (2) of the Tuberculosis Prevention Act, 1908. This Order prescribes that in every district to which Part I. of the Act extends, Section 1 of the Act shall apply, in the circumstances following, that is to say, in every case in which a person, not being at the time in receipt of institutional or other treatment under an approved scheme for the treatment of tuberculosis, is suffering from tuberculosis of any form, at any stage, at which the sputum or other infective discharge of or from such person is, in the opinion of the medical practitioner attending on such a person, liable to communicate the disease to others.

CANCER.—There is an increase of 53 in the number of deaths from cancer, 3,864, as compared with the year 1918. With the exception of the mortality for 1916, during which 3,938 deaths were registered, and that for 1913, when there were 3,900 deaths, the number of deaths from cancer in 1919 is the highest annual number recorded for Ireland. Of the total deaths, 1,837 were of males, and 2,027 were of females. The following rates—0·87, 0·82, and 0·92 per 1,000—represent the total deaths, the deaths of males, and the deaths of females respectively.

The deaths assigned to cancer include those returned as from carcinoma, sarcoma, malignant disease and cancer.

Particulars of age, sex, and the affected organs can be obtained from the disease abstracts, commencing with page 37, and from Table XI., page xxiii.

TUMOUR.—With reference to deaths from tumours, it may be observed that these growths were stated to be either non-malignant, or further information could not be ascertained.

The deaths of 17 males and 33 females were caused by tumours, other than those of the brain, uterus and ovary.

Of the 17 deaths of males, 3 were from tumour of the intestines, 3 of the larynx, 3 of the bladder, 2 of the kidney, 2 of the abdomen, and one death each from tumour of the neck, mediastinum, prostate and thorax.

The 33 deaths of females include 10 from tumour of the abdomen, 3 each from tumour of the intestines, kidney and liver, 2 from tumour of the side, and one death each from tumour of the throat, lung, thorax, bladder, hip and spleen. There was one case in which the seat of the tumour was stated to be "internal," and in 5 instances the part affected by the tumour was not forthcoming.

RHEUMATISM.—Deaths under rheumatism were 653 in number, and include 248 assigned to acute conditions, and 405 to chronic rheumatism, the corresponding figures in the year 1918 being 552, 198, and 354.

GOUT.—The deaths of 6 persons—3 males and 3 females—were attributed to gout.

DIABETES.—Although the deaths from diabetes were 28 more than in the year 1918, they were below the number in 1917, namely, 379, and the average, 380. The deaths in 1919 were 339 in number, 179 being those of males and 160 of females.

OTHER GENERAL DISEASES.—This heading includes exophthalmic goitre which caused the deaths of 20 females and one male; Addison's disease, which accounted for 22 deaths, in which the males and the females were equally distributed; leucocythæmia from which 23 deaths occurred, 4 being of males and 19 of females; lymphadenoma, which caused 15 deaths—10 of males and 5 of females; and to the heading anæmia, chlorosis, the deaths of 139 males and 177 females, altogether 316, were assigned.

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease

Printed image digitised by the University of Southampton Library Digitisation Unit

ALCOHOLISM.—The decline of mortality from alcoholism which has been referred to in previous reports, has been maintained. The deaths referred directly to this cause in 1918 were 23, and in the year under notice 19; of the latter figure, 16 were deaths of males, and 3 were of females. There were 6 deaths which were classified to acute poisoning by alcohol. See Table, page xxviii.

INDUSTRIAL POISONING.—Only one death occurred (that of a man) from chronic lead poisoning.

CEREBRO-SPINAL FEVER.—There is a decline from 73 deaths in the year 1918, to 40 in the year under notice from this disease; the 40 deaths include 24 of males and 16 of females.

POLIOMYELITIS.—Eleven deaths (5 of males and 6 of females) were caused by infantile paralysis, and there were 6 from acute anterior poliomyelitis (2 of males and 4 of females).

MENINGITIS.—There were 66 deaths certified as from encephalitis, 35 of males and 31 of females; the 35 deaths of males include 2 returned as encephalitis lethargica, and the 31 deaths of females include 2 from the latter cause; of the deaths from encephalitis lethargica the ages of the males were 21 and 68 years, and of the females 10 and 46 years. The number of deaths from simple meningitis was 575, of males 311, and of females 264.

EPILEPSY.—Of the deaths which numbered 296 the males were 163 and the females 133; in each of the 3 preceding years deaths from epilepsy were 305, 353, and 288.

CONVULSIONS.—The cause of death given in 997 instances was convulsions, 592 of the number being of males and 405 of females. The 997 deaths are represented by a rate of 0·23 per 1,000 of the estimated population, or 1·3 per cent. of the total deaths registered. Of the total (997) there were 809 infants under the age of one year and 98 between the ages of one year and two years, the 809 deaths being 10·3 per cent. of the total deaths of infants under one year of age from all causes for the year under notice.

CEREBRAL TUMOUR.—The number of deaths from cerebral tumour, the nature of which was stated to be simple or that further information could not be ascertained, was 38, of males 21 and of females 17. Resulting from supplementary inquiries regarding deaths, certified as having been caused by cerebral tumour, 2 deaths were classified to tuberculosis, 6 to malignant disease and one to epilepsy.

NEURITIS.—The deaths, 45 in number, under the heading, hysteria, neuralgia, neuritis included 25 of males, and 20 of females. In the 3 years preceding, deaths from these causes were 45, 60, and 36 respectively.

DISEASES OF THE HEART.—Diseases of the heart, caused the deaths of 7,565 persons, (males 3,626, and females 3,939), or 9·6 per cent. of the total deaths registered, and afford a rate of 1·70 per 1,000 of the estimated population. Included in the total deaths, were 28 from pericarditis, 12 from infective endocarditis, 26 from acute endocarditis, 2,400 from valvular heart disease and chronic endocarditis, 143 from fatty heart, and 183 from cardiac dropsy.

BRONCHITIS.—The deaths, in number 6,593, are in excess of those which occurred in the year 1918, namely 5,794, but 39 below the average. The deaths in 1919 are 8·4 per cent. of the total registered in Ireland in the year, and represent a rate of 1·48 per 1,000 of the estimated population.

Printed image digitised by the University of Southampton Library Digitisation Unit

PNEUMONIA.—Although the total deaths from pneumonia (5,245) are not as numerous as in the year 1918, in which year 6,120 deaths were recorded, they are, nevertheless, considerably in excess of the average deaths from pneumonia in the 10 years ending with the year 1917, namely 4,067; it is reasonable to assume that the excess over this average was caused by the epidemic of influenza, which was pandemic in Ireland during the March quarter of 1919. The deaths which were directly attributed to influenza in 1919 were 9,406, this number, if added to the difference between the total deaths from pneumonia in 1919 and the normal average, would, on this assumption, increase the number of deaths due to influenza from 9,406 to 10,584. The mortality from pneumonia during the year 1919 by ages and sexes is given in Table X, page xviii, for each county and province in Ireland.

PLEURISY, EMPYEMA.—Including deaths from empyema for which no other cause could be ascertained, the deaths assigned to pleurisy in 1919 were 203 in number; of these, 113 were of males and 90 of females.

In the course of 16 years, 1904–19, the deaths of 507 persons (365 males and 142 females) were registered as having been caused by empyema. Resulting from special inquiry as regards the 365 deaths of males, 95 were transferred to tuberculous disease, 35 to pneumonia (10 to lobar pneumonia, 7 to broncho-pneumonia, 2 to pleuro-pneumonia, and 16 to pneumonia, type not stated), 4 were assigned to injury, 7 to influenza, 2 each to enteric fever and hepatic abscess, and 15 to other causes. Forty-one cases were stated to have originated with pleurisy.

The investigation into the 142 deaths of females resulted as follows:—39 were transferred to tuberculous disease, 17 to pneumonia (9 to lobar pneumonia, 3 to broncho pneumonia, and 5 to pneumonia, type not stated), in 7 cases influenza was ascribed as the origin, in one enteric fever, and in 6 cases other causes were assigned. In 17 instances pleurisy was ascribed as the cause.

As regards 164 deaths of males, and 55 of females, the causes originating empyema could not be ascertained.

CIRRHOSIS OF LIVER.—Deaths from cirrhosis of the liver were 146 in number, including 93 deaths of males, and 53 of females; in the three preceding years, deaths from cirrhosis of the liver were 243, 175, and 165 respectively.

THE PUERPERAL STATE.—The mortality connected with puerperal conditions includes deaths from septic conditions, deaths from intrinsic accidents of childbirth and deaths in combination with some pre-existing or secondary disease; in the first category there were 155 deaths, in the second 263, and in the third 106 deaths; altogether the deaths numbered 524, and were represented by a rate of 5·87 per 1,000 of all births registered during the year.

There is not much difference in the mortality from septic puerperal conditions, and accidents of childbirth as compared with 1918, but the deaths from causes associated with pregnancy have increased since the year 1917, when they numbered 51, to 90 in 1918, and to 106 in 1919; the 106 deaths include those of 53 women, who suffered from influenza.

Notwithstanding this unfortunate circumstance, the rate of mortality for the puerperal state for the year 1919, namely, 5·87 per 1,000 births, is less than that in the year 1909, during which the rate was 6·27, the total deaths numbering 644.

Table XIIA. presents particulars of these causes of death in detail for the year 1918; Table XIIB. supplies a comparison of the mortality for 1919 with each of the ten preceding years; while Table XIIC. furnishes by provinces, counties and county boroughs the rates of mortality in the year 1919, in comparison with the average for the five preceding years, as regards puerperal septic diseases and diseases and accidents of pregnancy and child-bearing.

VIOLENCE.—The deaths from violence registered during the year 1919 in Ireland include 67 by homicide, 130 by suicide, 24 deaths of soldiers caused by wounds received in battle, and 1,215 by other causes, including accidents; these taken together give a total of 1,436 violent deaths. In the year 1918 there was a corresponding total of 1,505, including 32 deaths by homicide, 110 by suicide, 29 by wounds received in battle, and 1,363 other deaths by violence, including accidental deaths.

The deaths which were definitely assigned to homicide, 67 in number, include the deaths of 54 males (4 of this figure being infants under one month old), and 13 of females, 7 of whom were under one month old.

The suicidal deaths (130) included the deaths of 98 males and 32 females.

The deaths, other than those which have been definitely classfied to homicide, and suicide, include 25 deaths by accidental poisoning, 306 by burns and scalds (of these 148 were of children under 5 years of age); and 186 by drowning.

The following Table gives the details of mortality from poisons, in relation to homicide, suicide, and accident, also the name of the poisonous substance.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

Ill-defined Causes of Death.

In this group 41 deaths were from dropsy, 233 from syncope, 101 from sudden death (not otherwise defined), 1,285 from heart failure, 667 from debility or atrophy, 26 from teething, 49 from other ill-defined causes, and in 84 cases the cause of death was not specified. The above deaths were in the aggregate 2,486, and constituted 3·2 per cent. of all deaths registered during the year 1919.

Uncertified Causes of Death.

Of the total deaths (78,612) there were 17,188 which were not certified by a medical practitioner; of this number 11,250 were deaths of persons aged 65 years, and upwards, and 2,117 were of infants under one year of age. The uncertified deaths are 21·9 per cent. of the total deaths. It is regrettable that this proportion of uncertified cases exceeds that for the year 1918, namely 18·5, although under the average (22·5) for the ten years, 1909-18.

Inquests.

According to returns furnished by the Registrars, the number of inquests during the year 1919 was 1,105, or one inquest in every 71 deaths registered.

AGES AT DEATH.

Deaths of children under 5 years of age during the year numbered 12,320, or 15·7 per cent. of all the deaths registered, the deaths of male children amounting to 6,768, or 17·3 per cent. of the total deaths of males, and the deaths of female children, 5,552, or 14·0 per cent. of the deaths of females at all ages.

There were 31,142 deaths of persons aged 65 years or upwards, being 39·6 per cent. of the total deaths registered. Included therein are 25,663 deaths of persons aged 70 years or upwards, or 32·6 per cent. of all the deaths recorded during the year.

Among these deaths are 456 of persons aged 95 years or upwards, 217 being those of males, and 239 of females, including 85 deaths, comprising 36 of males, and 49 of females, whose ages at death were returned as 100 years or upwards.

The death rates per 1,000 of the population at each of the undermentioned age-periods, were as follows:—Under 5 years, 28·6 per 1,000; 5 and under 10 years, 4·1; 10 and under 15 years, 3·3; 15 and under 20 years, 6·0; 20 and under 25 years, 7·8; 25 and under 35 years, 8·8; 35 and under 45 years, 10·1; 45 and under 55 years, 16·5; 55 and under 65 years, 29·1; 65 and under 70 years, 37·5; 70 and under 75 years, 48·2; and at the age-period, 75 years and upwards, the rate was 133·8 per 1,000 of the estimated number living at this age-period.

INFANT MORTALITY.

The deaths of 7,841 infants under one year of age were registered in Ireland during the year 1919, a number equivalent to 88 in every 1,000 births registered, as compared with 86 per 1,000 in 1918, and an average of 90 for the 10 years, 1909-18.

The deaths of infants under one year old in 1919 include 4,497 males and 3,344 females, the former number being equal to 97 per 1,000 births of males, and the latter affording a rate of 78 per 1,000 births of females. The corresponding infant mortality rates for 1918 were 96 and 77 respectively.

In 1919 and 1918 the rates for deaths of infants under one year of age in England and Wales were 89 and 97 per 1,000 births respectively, the rates for Scotland being 102 and 100 per 1000 births registered.

In Table XIV. the infant mortality rates for Ireland, England and Wales and Scotland for each of the years 1864-1919 are given.

TABLE XV. gives the infant mortality for the whole of Ireland in each of the eleven years, 1909–1919, by certain causes and in the case of 1919, by age-periods and sexes.

From this table it will be seen that, in comparison with 1918, the principal decreases relate to whooping-cough (decrease, 1·74 per 1,000) and measles (decrease, 0·71 per 1,000).

The principal increases are observable in the mortality from influenza (increase 1·28 per 1,000), premature birth (increase, 0·79 per 1,000), bronchitis (increase, 0·47 per 1,000), convulsions (increase, 0·47 per 1,000), and pneumonia (increase, 0·38 per 1,000).

TABLE XVI. gives the infant mortality by causes, sexes, and age-periods represented by deaths of infants *registered* during the year 1919 in the Registrar's districts containing towns of over 10,000 inhabitants—"Nineteen Town Districts."

Printed image digitised by the University of Southampton Library Digitisation Unit

The following is a summary of these particulars as compared with the remainder of the country and with Ireland as a whole, with corresponding figures for 1918 :—

AGES	Infant Mortality, 1919—Deaths under one year per 1,000 Births registered.

The aggregate infant mortality rate for the "Nineteen Town Districts" in 1919 was 116·06 per 1,000 births registered, as compared with 131·15 in 1918. For the remainder of the country the rate in the former year was 74·06, as against 66·10 in 1918. Thus the rate for the town districts is 15·09 per 1,000, or 11·5 per cent. less than that for 1918, while the mortality among infants in the remainder of Ireland is 7·96 per 1,000, or 12·0 per cent., more than that which prevailed in the year 1918.

According to the Yearly Summaries of the Weekly Returns furnished by the Registrars, the infant mortality rates (corrected for births and deaths in institutions) for the "Nineteen Town Districts" in 1919 with the increase or decrease as compared with the average rate per 1,000 births for the five years preceding, were as follows :—Dublin Registration Area 141, decrease 13 * Belfast 113, decrease 20 ; Cork 100, decrease 17 ; Londonderry 120, increase 14 ; Limerick 117, equal to average ; Waterford 124, increase 9 ; Galway 85, decrease 19 ; Dundalk 83, decrease 16 ; Lurgan 51, decrease 57 ; Drogheda 103, increase 15 ; Lisburn 115, decrease 14 ; Newry 119, decrease 39 ; Portadown 134, increase 26 ; Wexford 95, equal to average ; Ballymena 81, decrease 22 ; Sligo 164, increase 60 ; Kilkenny 80, increase 6 ; Tralee 56, decrease 13 ; and Clonmel 43, decrease 38.

During the year 1919, the infant mortality rate for London was 85 per 1,000 births and in 1918 it was 107, the rate for Liverpool in 1919 was 110 per 1,000 births and in 1918 the infant mortality was 124, the respective infant mortality rates in 1919 and 1918 for Glasgow were 114 and 113, and for Edinburgh, 117 and 94

Table XVII. affords a comparison of the rates of infant mortality per 1,000 births in 1919 with 1918, represented by the deaths of infants under one year of age as *registered* in each county and county borough in Ireland.

* As compared with the four years (1915-18) only in the case of Dublin ; in all other cases the comparison of the figures for 1919 is made with those for the five years, 1914–18.

[Table.

EMIGRATION.

According to the returns furnished to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1919 was 2,975, of whom 1,137 were males and 1,838 were females. Of the total emigrants, 678 were natives of the province of Leinster, 449 of Munster, 1,690 of Ulster, and 158 of Connaught.

NOTE.—*The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland; the number of persons receiving In-door and Out-door Relief by the Local Government Board, and the prices of bread by (a) Messrs. Bolands, Limited and (b) Messrs. Johnston, Mooney, and O'Brien (Limited)*

It appears that during the period covered by foregoing table, the price of beef was lowest in the year 1909, when the average was 58s. 3d. per cwt.; in the years 1910, 1911, 1913 and 1914, bread was cheapest, when the average price (bread delivered) was 6d. per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1911, in which year the average price was 13s. 8d. per cwt.; and potatoes in 1909, when the average price was 2s. 10d. per cwt. During the year 1919, the average price of beef was highest, viz., 142s. per cwt. The average price of the 4 lb. loaf was highest in 1917, being 10¾d. In the same year the price of oatmeal (1st quality) was highest at 43s. 3d. per cwt., and potatoes at 8s. 6½d. per cwt.

Table XVIII. also shows that the average number of workhouse inmates in Ireland on Saturdays during the year 1919 was 25,362, showing a decrease of 2,222 when compared with the average for the preceding year, and that the average number of persons receiving out-door relief was 35,250, or 508 over the corresponding average for 1918.

THE WEATHER

The following information has been extracted from returns of Meteorological Observations taken in the City of Dublin, and published in the monthly editions of the "Dublin Journal of Medical Science," from March, 1919, to February, 1920, by Sir John Moore, M.A., M.D., D.P.H., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC., D.L., Hon Physician in Ordinary to His Majesty the King in Ireland.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rain day* is one on which at least ·005 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1919 was 29·936 inches. The highest observed reading was 30·750 inches at 9 A.M. on March 17th. The lowest observed reading was 28·450 inches at 6 A.M. on January 7th. The extreme range of atmospherical pressure was 2·300 inches, as compared with 2·054 inches in 1918.

The *Mean Temperature* of the air for the year was 48·8°. The highest reading was 74·2° on August 16th, and the lowest reading was 24·8° on November 30th. The average mean temperature for the twenty years, 1899–1918, was 50·0°.

Rain fell on 210 days, including snow or sleet on 30 days and hail on 33 days. The average annual number of rainy days in the years 1899–1918 was 202. The total rainfall measured 26·165 inches, compared with an average of 28·348 inches in the twenty years, 1899-1918. During the first half of 1919 (January to June, inclusive) the rainfall was 11·897 inches on 106 days; during the second half (July to December, inclusive) 14·268 inches fell on 104 days.

Reports on the weather throughout Ireland during each quarter of the year 1919, as furnished by the Meteorological Office, are published in my Quarterly Returns of Marriages, Births and Deaths for that year.

I have the honour to be,

Your Excellency's faithful servant,

WILLIAM J. THOMPSON.

Registrar General.

General Register Office,

Charlemont House,

Dublin, 2nd October, 1920.

1869	5,449,094	2,659,713	2,789,381	1894	4,588,260	2,259,919	2,329,341	1919	4,462,000	2,255,000	2,207,000

NOTE.—This Table has been constructed for the years 1845 and 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year as given in the Irish Census Reports of 1851 an allowance proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death-rates as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872 to 1911—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, 1892-1901, and 1902-1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of these years.

1915 to 1919—The estimated population for each of these years has been computed as in 1914 with some additional adjustments with regard to the movements of the military.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, 1901, and 1911.

INDEX TO SUPERINTENDENT REGISTRARS' DISTRICTS.

[The following Index furnishes a reference to the NUMBER or NUMBERS of each Superintendent Registrar's District in the Tables of Abstracts contained in the Report, in which the numbers run consecutively from 1 to 209]*

A.

Abbeyleix .. 41
Antrim .. 119
Ardee .. 36, 33
Armagh .. 127
Athlone .. 48, 199
Athy .. 9, 42

B.

Ballaborough .. 133
Ballina .. 192
Ballinasloe .. 177, 200
Balbunrobe .. 193
Ballycastle .. 120
Ballymahon .. 27, 47
Ballymena .. 121
Ballymoney .. 122
Ballyshannon .. 139, 157, 187
Ballyvaghan .. 61
Belrothery .. 4
Beltinglass .. 1, 10, 56
Banbridge .. 128, 149
Bandon .. 69
Bantry .. 70
Bawnboy .. 134, 188
Belfast .. 123, 132, 150
Belmullet .. 194
Birr .. 22, 100
Borrisokane .. 101
Boyle .. 201, 208

C.

Cahersiveen .. 86
Callan .. 14, 105
Carlow .. 2, 43
Carrickmacross .. 186
Carrick-on Shannon .. 189, 202
Carrick-on-Suir .. 15, 106, 112
Cashel .. 107
Castlebar .. 195
Castleblayney .. 129, 137
Castlecomer .. 18
Castlederg .. 170
Castlereagh .. 203
Castletown .. 71
Cavan .. 135
Celbridge .. 5, 11
Claremorris .. 196
Clifden .. 178
Clogheen .. 108
Clogher .. 171
Clonakilty .. 72
Clones .. 158, 188
Clonmel .. 109, 113
Coleraine .. 162
Cookstown .. 172
Cork .. 73
Corrofin .. 62
Croom .. 92

D.

Delvin .. 48
Dingle .. 87
Donegal .. 140
Downpatrick .. 151
Drogheda .. 31, 34
Dromore West .. 207
Dublin .. 6, 8
Dundalk .. 32
Dunfanaghy .. 141
Dungannon .. 175
Dungarvan .. 114
Dunmanway .. 74
Dunshaughlin .. 35

E.

Edenderry .. 12, 23, 36
Enns .. 63
Enniscorthy .. 52
Enniskillen .. 136, 159
Ennistimon .. 64

F.

Fermoy .. 75, 93

G.

Galway .. 179
Glennamaddy .. 180
Glenties .. 142
Gorey .. 53
Gort .. 181
Granard .. 28, 49, 137

I.

Inishowen .. 143
Irvinestown .. 160, 174
